

Airpura 
AIR PURIFIERS

The Blunt Truth about

MARIJUANA

and Air Quality

With the legalization of marijuana in Canada and many US states, its increased use and the proliferation of “**weed industries**”, Airpura’s purifiers offer a superior air filtration and chemical abatement technology to handle the many air quality issues arising from marijuana. We break it all down here for you:

Odor Control

**AIRPURA T600
or
AIRPURA T600 DLX**

Neutralize pungent odors from both the plants and smoke from marijuana with these purifiers containing 26-lbs of activated carbon and a tar barrier.

Good for:

- Homes with marijuana smokers
- Common areas of apartment/condos (Ask us about wall brackets to secure purifiers.)

Chemical Abatement

**AIRPURA T600
or
AIRPURA T600 DLX**

Powerful oxidizers in these purifiers will adsorb the toxic chemicals and tars from marijuana smoke which contains 50-70% more carcinogenic hydrocarbons than tobacco smoke.

Good for:

- Preserving health of employees at cannabis dispensaries
- Neighbors of marijuana smokers
- Restaurants and bars

Mold Control

AIRPURA UV600

Prevent the growth of mold on your marijuana stocks with this this purifier that utilizes UV light technology and 3 levels of filtration.

Good for:

- Cannabis dispensaries and production centers
- Private marijuana growers

HOW TO GET THE MOST BENEFITS FROM AN AIR PURIFIER

- **To ensure air has maximum dwell time in the carbon, run your purifier on low-moderate speeds all day long, seven days a week.**
- **Adjust your humidity levels to between 40-50%.**
- **Keep in mind: The more porous items that are in your space (such as carpeting, couches, etc), the more difficult it will be to entirely remove odors since the smells will be embedded in these items.**
